Dobrin Dobrev

Javascript Developer

👤 Profile

I am a JavaScript developer and have just finished my bachelor's degree in Informatics in Plovdiv, Bulgaria. I love building creative, responsive, and blazing fast websites... I specialize in creating dynamic websites using headless content management systems. The results are super fast and easy to use websites with amazing designs, search engine optimization, and free hosting, provided by Netlify. Recently, I have been working a lot with Gatsby and GrafQL. I can build e-commerce sites, blogs, portfolio websites, progressive web apps.

I use technologies like React, Redux, GrafQL, ContextAPI for state management, FireBase for authentication, SASS, Styled Components, React Spring for styling and animations, Stripe integration's for payments, and many more.

I am used to writing very well structured and self-explanatory code and I am well versed in the OOP paradigm. Also a fast learner and a team player.

All my projects are available on my website: https://dobrindobrev.io/.

🎓 Education
